

WHAT IS INVISIA-EDGE™?

At Innovation Cabinetry, we use only Invisia-edge banding—a premium detail that reflects our commitment to superior quality and craftsmanship. Unlike traditional edge banding that uses glue, Invisia-edge™ features a pre-applied, functional layer that is activated using advanced hot air edge banding technology. The result is a flawless, seamless bond between the edge and the board—no glue lines, no visible seams, just a refined, high-end finish.

WHY INVISIA-EDGE™ MAKES A DIFFERENCE:

Invisible Joints

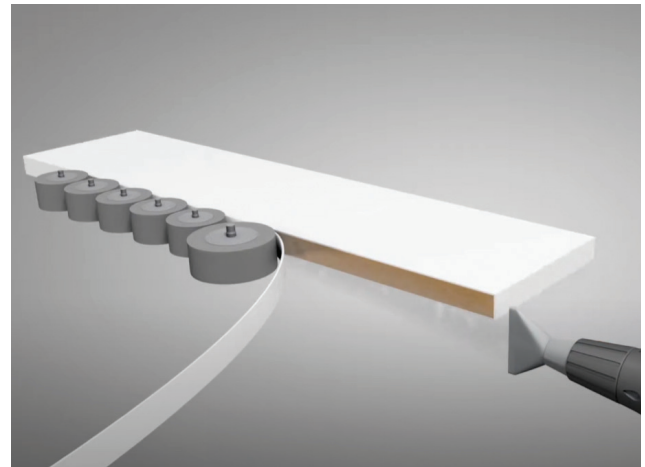

Invisia-edge™ creates an almost imperceptible connection between the cabinet surface and the edge band. This seamless integration delivers a sleek, modern look with no distracting lines.

Eco-Friendly Solution

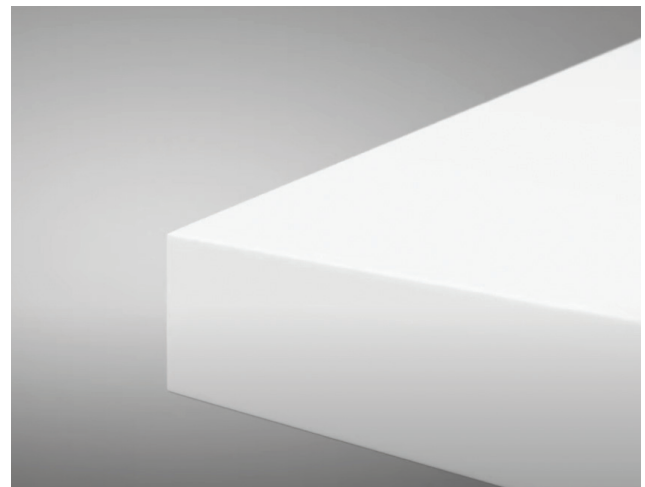

Invisia-edge™ is an environmentally conscious choice. Free from traditional adhesives, it supports more sustainable manufacturing practices and contributes to greener design solutions.

Exceptional Durability

The tight seal formed by Invisia-edge™ helps protect the cabinet from moisture, dirt, and other contaminants from infiltrating the joints. This added defense boosts the cabinet's lifespan and performance—especially in high-use spaces. Invisia-edge™ - perfect seamless edges every time!

Hot Air Technology

Seamless Edge Technology

Note: Invisia-edge™ banding is available on Urban™ and Profile™ slab door styles made in the U.S.A
